Surgical Workshop

Treatment of Male Urinary Incontinence with ATOMS

Date

Dates are planned exclusively on an On-Demand basis

Location

“Kepler Universitätsklinikum GmbH”
Department of Urology & Andrology
Med Campus II.
Krankenhausstraße 7a
4020 Linz
Austria

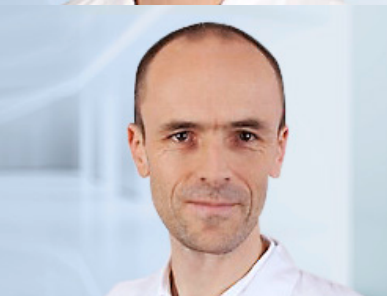

Content

- Introduction to the ATOMS Implant
- Discussion and comparison with other treatment options for stress urinary incontinence in males
- Live ATOMS implantations
- Implantation technique
- Presentation and discussion of initial results

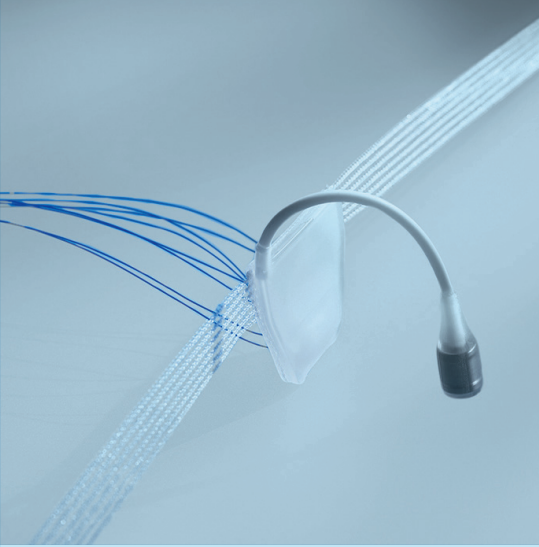

Dr. Martin Wohlmuth, Senior Specialist

Dr. Piotr Wegrzecki, Senior Specialist

Senior specialists, Dr. Martin Wohlmuth and Dr. Piotr Wegrzecki, are both well-respected urologists, who are focused on treating patients suffering from various urological conditions. They have also already gained a wealth of experience in treating male stress urinary incontinence with ATOMS. They are more than qualified and excited to pass their knowledge onto the workshop participants!

The treatment of stress urinary incontinence in males still presents a considerable challenge, with a significant percentage of radical prostatectomy patients remaining incontinent 6 to 12 months after surgery. ATOMS also works for patients confronted with serious problems after TURP.

Designed for transobturatic implantation, ATOMS now combines a minimally-invasive and low-risk method with the option of easy pressure adjustment.

ATOMS

Adjustable Transobturator Male System

- The two-part system consists of a mesh implant with integrated adjustable cushion and an implantable silicone-wrapped titanium port for adjusting the cushion volume
- Patient-specific adjustment is possible at any time with no surgical reoperation necessary
- ATOMS requires no additional fasteners or screws to be secured in place
- The implant is suitable for all degrees of stress urinary incontinence, even in patients after radiotherapy

Program

Day 1 _____

Arrival in Linz no later than 06.00 pm.
(if arriving at the airport, please allow at least one hour from the time of landing to the arrival at the hotel).

07.00 pm

Dinner with Dr. Wohlmuth, Dr. Wegrzecki, A.M.I. representative and workshop participants

Day 2 _____

Approx. 07.00 am

Depart for the hospital

08.00 am

Workshop with theory commences in the operating theatre

01.00 pm

Workshop ends

Departure from Linz airport should be no earlier than 04.00 pm.

About the Hospital

The Department of Urology and Andrology at the Kepler University Hospital, headed by Prim. Univ.-Prof. Dr. Frens Steffen Krause, specializes in a broad spectrum of urological diseases. In the past few years, the department has developed into a transregional center for urological cancer treatment, minimally invasive surgical techniques, laser applications and open urethral surgery. Patients treated here are guaranteed top consultation from highly educated professionals, treated with the most modern technology and all in a caring and friendly atmosphere.

Accommodation

Accommodation is reserved by you at your expense.

Recommended hotel: Hotel Schwarzer Bär, Herrenstraße 11, 4020 Linz

Registration

Registration is compulsory.

Spaces at these workshops are in high demand and are allocated by invitation only. Should you be interested in attending a workshop, please contact your local A.M.I. representative. You will then be waitlisted, and subsequently contacted as soon as a space becomes available.

General Information

Depending on the participants, workshops will be conducted in English and/or German. Therefore a sound, working knowledge of either language is a prerequisite for attendance. To respect the privacy of the patients, we kindly ask you to refrain from taking pictures during surgery.
